

Videos?! Where to put them.

Most of the Hybrid/HyFlex courses at Tarleton have an automation link added to the Modules area for starting and recording Zoom class meetings and automatically adding the video to the Course Recordings area of your course. But how do you add videos to your course that you record outside of Zoom **WITHOUT** eating up all your course file storage space? The answer is to use **Canvas Studio!**

What is Canvas Studio?

Canvas Studio is a media tool that allows instructors and students to upload, create, edit, manage, share, and discuss audio and video files. Existing files can be uploaded or create new videos with Studio's capture and editing tools.

Using Canvas Studio in a Course

Video files can be quite large, and if you add them to your course through the "Record/Upload Media" button on the toolbar, you will quickly max out the file storage limit for your course. However, the files added to Canvas Studio **DON'T** count against course file storage limits.

SAY WHAT??!!

YES! You can have a bunch of video files in Canvas Studio and not have to request a course storage limit increase!! WOOHOO!

You can embed Canvas Studio media files in any content area including modules, assignments, pages, quiz questions, announcements, and other course items. Also, students can submit audio and video files to assignments and discussions using Canvas Studio.
